Fort Pierce Concrete Works

(INCORPORATED)

Manufacturers of High Grade Concrete

BUILDING - BLOCKS

Now equipped to manufacture, in one or two piece blocks of any thickness and any finish desired—Rough Rock surface, Beveled surface or Plain surface. Also Cornices, Ornamental Blocks, etc., in large variety.

To those who contemplate building in the near future, whether a small cottage, a large business block or a fine residence, we urge that, before making your plans, you investigate the comparative cost and the many advantages of Concrete for building purposes. As is well known, lumber has been advancing continually in price for some time, and is still advancing. The first cost of a concrete building is only a trifle more than one built of wood, and when you figure the saving in paint, repairs and insurance, the additional cost is not to be considered.

Concrete is More Durable than Wood or Stone

It does not deteriorate with age, but rather becomes harder and harder as the years roll on.

We are now manufacturing some of the finest building blocks ever made in any country, and shall be pleased to have you call and inspect them. Shall take pleasure in submitting any test required, and can prove to you their high quality.

We will soon have a machine installed for the manufacture of Cement Brick, about which we will have more to say later on.

We are equipping our plant for the manufacture of reinforced Concrete Fence Posts, non-breakable and more durable than steel, and shall also make Concrete Sidewalk Blocks, and, in fact anything which can be made of concrete.

Correspondence and Investigation Invited.
